

Working Committee 77 Local Number Portability

Terms of Reference

Description: The Communications Alliance **Operations Reference Panel** has been constituted as **Working Committee 77 Local Number Portability** to perform a specific area of revision in relation to the Local Number Portability Code (C540:2013 incorporating variation No1/2015) and its associated Guidelines, which has been recommended by the Fixed Line Administration Group.

Constitution: Membership of WC 77 is limited to current members of the Operation Reference Panel.

Scope: The scope of activities WC 77 will perform include:

- revising any relevant LNP documents, including the LNP Industry Code, Operations Manual, IT Specifications and test documents that are affected by the following changes;
 - update the LNP Code to remove the requirement to reject a request where the FNN and account number don't match on a Category A or Category C port notification; and
 - where relevant, ensure that existing validation can continue to match FNN and account number to limit the change only to those that fail this validation. This will ensure any IT and process change is minimised for Carriers/CSPs.
 - align the PNV process with the LNP Code revision.
